MRS-612

TECHNICAL DATA

Water-Base Pre-Cleaner

DESCRIPTION:

MRS-612 Water-Base Pre-Cleaner is a water-based pre-cleaner formulated to remove road grime, silicone, grease and wax. The pre-cleaner is VOC compliant in all regulated areas.

FEATURES:

- ✓ Leaves no residue when used properly
- ✓ Low V.O.C formula designed for use in California and all areas
- ✓ Can be sprayed directly on cool surfaces with **RS-805 Applicator**

APPLICATION:

Pre-Cleaner/Final Wash

1. Apply **MRS-612 Water-Base Pre-Cleaner** directly to cool surface to be cleaned. Can be applied with a clean cloth or sprayed. **RS-805 Applicator** is an excellent pressurized applicator for applying **MRS-612 Water-Base Pre-Cleaner**
2. Allow pre-cleaner to lay on the surface to penetrate contaminants. **MRS-612 Water-Base Pre-Cleaner** must remain wet to penetrate and dissolve any waxes and/or silicones.
3. Remove pre-cleaner before it dries on the surface using clean, lint-free cloth. Wipe until the surface is dry.

Note: The above steps are recommended before grinding or sanding any repair area. If these steps are not followed there is a possibility of forcing contaminants into the metal or surface which could result in poor adhesion of filler and /or primer as well as topcoating issues.

Material Safety Data Sheet (MSDS) is available on our website
