## RS-508

## TECHNICAL DATA

### Super Series Graphite Base Nut Cracker

#### DESCRIPTION:

RS-508 Graphite Base Nut Cracker is the second introduction in our line of Super Series chemicals. This product is a special formula that will quickly release rusted or corroded bolts, nuts, shackles, brake cables, king pins, muffler clamps and a host of other seized metal parts. RS-508 has an excellent migration ingredient built in the formula that causes it to find its way into the smallest areas and provide a lubricating film. The solvent system is formulated to dissolve rust and corrosion to quickly loosen seized parts. RS-508 also leaves a graphite film wherever it is applied so that parts can be easily reassembled. The graphite film will not dry out or burn away even on hot surfaces.

#### APPLICATION:

1. Hold can 6-8 inches from object to be sprayed.
2. Spray lightly.
3. Allow a few seconds to penetrate.
4. Free frozed part.
5. A second application may be necessary where an extreme amount of rust or corrosion exists.
