RS-530

TECHNICAL DATA

Amber Rustproofing

DESCRIPTION:

RS-530 Amber Rustproofing is a high quality, wax/grease type coating designed to match factory applied rustproofing. RS-530 has a selection of rust inhibiting materials that both coat and penetrate the metal surface and are designed to remain indefinitely. Two special characteristics about this product are the fact that it coats so thoroughly and will not interfere with spot welds. RS-530 will run down into cracks and crevices while coating the entire panel in the process. It can also be applied in areas where spot welds will be used and not interfere with the weld or produce any hazardous byproducts. RS-530 will dry to a waxy type surface in less than 30 minutes and will not transfer off onto hands or clothing. RS-530 cleans easily with any solvent. This formula will never become brittle. It remains completely waterproof when cured.

APPLICATION:

1. Shake can well.
2. Apply evenly to any bare metal surface.
3. Can be applied without hazard in spot weld areas when fully dried.
Allow 1 hour before spot welding.
4. Invert can and purge nozzle.

FEATURES AND BENEFITS:

Features:

- Wax/grease combination
- Waterproof ingredients
- Flowable formula
- Weldable (when dry)
- Fast dry solvent system
- O.E.M. appearance
- Extension nozzle

Benefits:

- Never becomes brittle or loses adhesion
- Displaces existing moisture and seals it out permanently
- Seals all crevices and seams even in hard-to-reach areas
- Will not produce harmful byproducts when welded
- 30-45 minute tack-up time
- Replace O.E.M. material after repairs for factory warranty
- Reach virtually any area
