

RS-590/1290

TECHNICAL DATA

RS-590/ RS-1290 Flexi Grip

DESCRIPTION:

The Flexi-Grip Adhesion promoting system is specifically designed to promote strong adhesion on all types of automotive plastic except polyethylene. This system which includes a pre-wash (RS-620 Flexi-Clean) contains etching type resin that will coat and seal plastic parts so adhesion can be obtained with all types of paint systems. Flexi-Grip will work on all OEM aftermarket bumper covers as well as interior plastic (i.e. door panels, dash pads, kick panels). Flexi-Grip is easy to use and does not require prior sanding, however, sanding generally will further enhance adhesion. Neither Flexi-Clean (RS-620) nor Flexi-Grip (RS-590/1290) contains isocyanates as do some competitive products. Each Flexi-Grip aerosol can (RS-590) should treat approximately 8-10 full bumper covers.
