RS-365

TECHNICAL DATA

Trunk Pads

DESCRIPTION:

Many domestic and foreign car manufacturers are currently applying a sound deadening material that very closely resembles our RS-365 Trunk Pad. This sound deadening material is generally applied on trunk floors and floor pans below the passenger compartment. RS-365 is a dense asphalt-reinforced pad that can be molded to fit any type of irregular shape. Trunk Pads have permanent pressure sensitive glue on one side so application is as simple as removing the backing paper and applying the pad. Trunk Pads can be cut to shape very easily for duplicating factory pieces. Trunk Pads eliminate vibration and keep road sound to an absolute minimum. Trunk Pads can be painted with any type paint immediately after applied.
