## RS-526

## TECHNICAL DATA

### European Trim Black

#### DESCRIPTION:

RS-526 European Trim Black is a specially developed lacquer base paint designed especially for autobody trim parts that are exposed to stone and bug chips. European Trim Black is a self-etching formula that adheres so well to aluminum and stainless steel trim parts that you literally cannot get it off. European Trim Black will work on window trim, mirrors, doorposts, bumpers, bumper trim, valances, grills, etc. This product is suitable for any autobody application. The best way to apply RS-526 European Trim Black is in light coats, allowing each coat to tack up for 30-45 seconds. This allows the product to etch more effectively and reach a final cure faster.

#### APPLICATION:

1. Shake well.
2. Clean grease, wax and dirt from bumper.
3. For best results, use at 70° to 90°F.
4. Hold the can 10-12 inches from surface.
5. Several thin coats are better than one heavy coat.
6. To clean spray head after use, turn can upside down and spray.
