

RS-701

TECHNICAL DATA

Rubberized Undercoat

DESCRIPTION:

RS-701 Rubberized Undercoat is a premium grade rubberized undercoat that does not dry to a brittle consistency. Rubberized Undercoat is sprayable through any standard siphon gun.

APPLICATION:

1. Attach any standard siphon gun directly to can.
2. Attach air hose with pressure between 30 and 80 PSI.
3. Vary texture if necessary by varying air pressure.

ADVANTAGES:

1. Rubberized Undercoat contains a heavy residual rubber base that stays permanently pliable and resilient.
2. Rubberized Undercoat contains rust inhibitors to displace moisture and actually prevent rust.
3. Rubberized Undercoat never becomes brittle, as does the competitor's product.
4. Rubberized Undercoat contains no asbestos.
5. Our lab tests showed the competitor's product contained very little rubber, which is the principal sound deadening and abrasion-resisting ingredient.
